

Product Reference Guide

Abena offers a comprehensive selection of continence care that has been designed by experts to suit any situation. With this reference guide, you can explore the high quality Abena range to create the right combination of continence products and make the best choice for consumers. Notably, Abena was the first manufacturer in the world to hold the Nordic Eco-Label for continence products.

FSC® (Forest Stewardship Council) is an international non-governmental organisation dedicated to the promotion of responsible forest management worldwide. FSC®-certified products are made from raw materials from well-managed forests and responsible sources. The label's traceability and integrity are upheld through stringent control measures, and by choosing FSC®-certified products, you help take care of forests and the people and wildlife that call them home.

Drop System

Abena labelling follows the 'drop system' which can be used to identify the right absorbency level and thereby choose the right product to suit the individual's needs. The drop range goes from 1 to 9 - with 1 being light incontinence and 9 being very heavy incontinence. The more drops, the higher absorption capacity.

- 1-3 drops = light incontinence**
- 4-5 drops = moderate incontinence**
- 6-8 drops = heavy incontinence**
- 9 drops = very heavy incontinence**

Shaped Contenance Aids

ABENA San Premium

ABENA San Premium is a range of anatomically shaped, high-performance incontinence products ranging from light to very heavy incontinence. Sizes 1-4 are thinner in design and suitable for those who experience light to moderate incontinence. They are fitted with an adhesive strip that secures the aid to the underwear. Sizes 5-11 have a higher absorbency capacity and should be used with fixation pants for moderate to high incontinence.
